Locating best alternatives for client moving to Melbourne

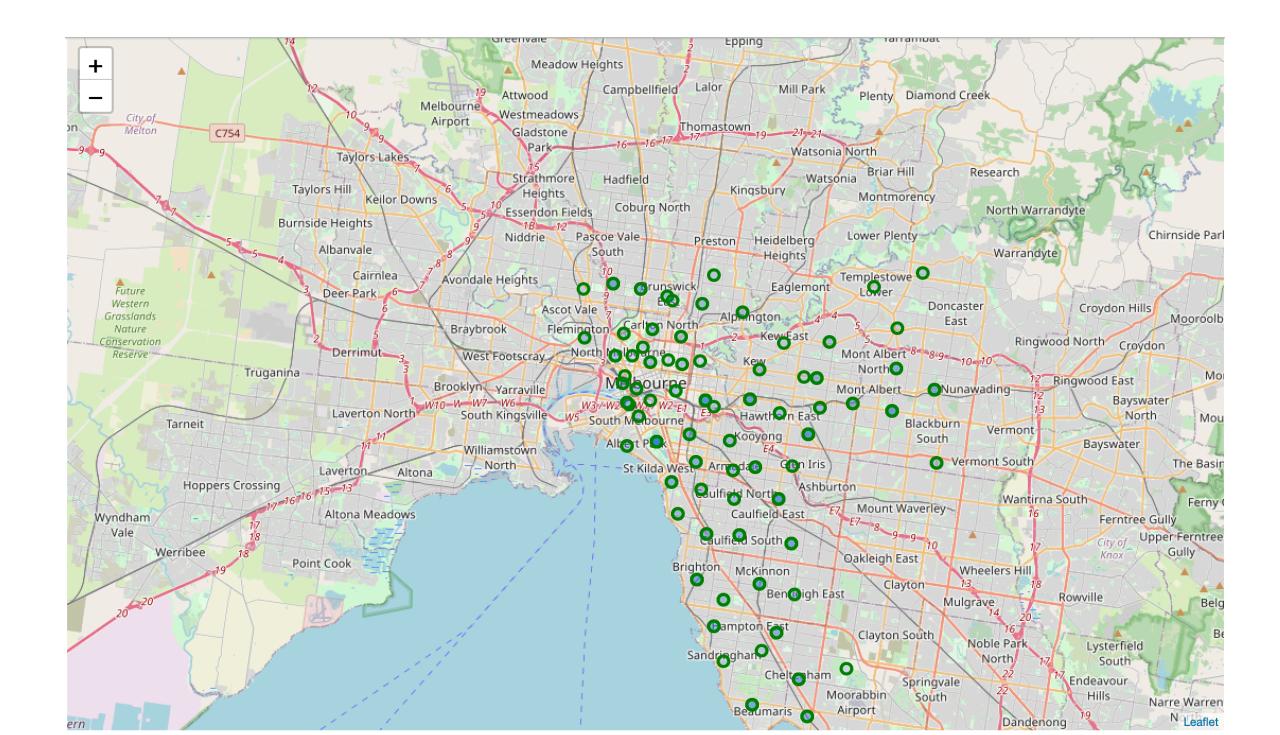

Problem Statement

- Potential home buyers will have a lot of questions including budget and the suburb we
 want to move into. A lot of time, potential home buyers may only have a rough concept
 which suburb they like but they do not have extensive research or information to
 identify alternatives.
- In this exercise, we want to simulate a scenario that my client is looking for a 3 rooms house in Melbourne. He likes Doncaster but he does not have a lot of understanding on other suburbs. As he does not have a lot of budget, it is needed for him to identify suburbs like Doncaster with lower house price.
- This question can then be generalised to be a suggestion engine leveraging similarity
 of suburb to guess what the potential home buyer may be interested.

Data

Melbourne Suburb (neighbourhood) data

- The data include i) state, ii) borough, iii) locality (neighborhood), iv) longitude and latitude, v) postcode
- · Data messaging was done to unify the name and data type, e.g. postcode is converted to int then string.
- This data will be used to find all the neighborhood in Melbourne. From the data, we see Greater Melbourne includes a lot of borough and we filter Inner Melbourne as the research base. Neighborhood information is plotted in map for better visualisation

Data

Suburb (neighbourhood) venue

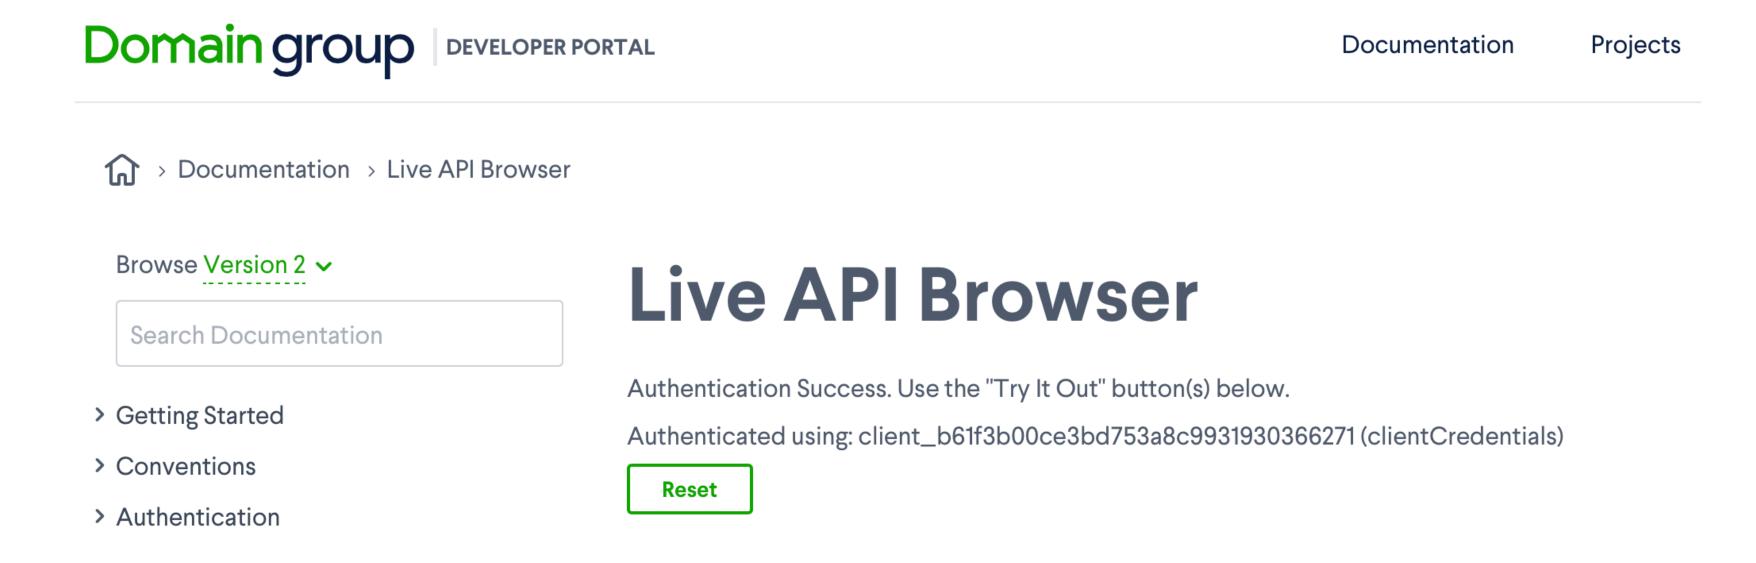

- https://developer.foursquare.com/
- We take the neighborhood longitude and latitude and use the Foursquare API to pull nearby venues. The venues are then grouped by type and measure the frequency using one hot encoding. This will later be used to form k-mean cluster.

	inde	Dist from X Target	NAIGHNATHAAG	PostCode	Long	Lat	Cluster Labels	1st Most Common Venue	2nd Most Common Venue	Most Common Venue	Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue
0		1 637.309802	ALBERT PARK	3206	144.950860	-37.846534	5	Café	Beach	Tram Station	Breakfast Spot	Asian Restaurant	Fishing Spot	Playground	Fast Food Restaurant

Data

Property Sold Price

- https://developer.domain.com.au/
- As house sold price is the key concern of my client who want to find lower cost alternatives, we have identified the data source from Australia largest estate agency domain.com.au and use their API on suburb performance statistic (https://api.domain.com.au/v2/suburbPerformanceStatistics/). The API will return median sold price, highest and lowest sold price. We have taken the .data in 2020 and house price with 3 rooms as a benchmark.
- We have used Live API Browser to understand the request and response details.

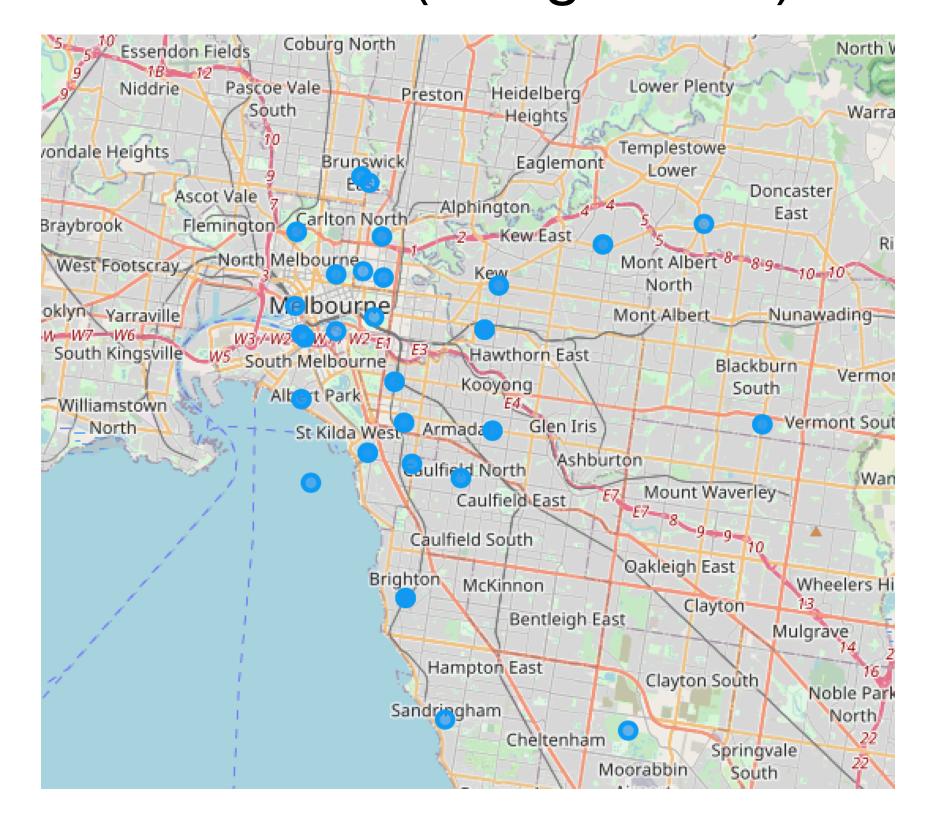

Methodology

How do we come up with our suggestions

- The client like the suburb Doncaster for the venues and facilities
- Use k-mean cluster to find suburbs that are similar to Doncaster
- Find suburbs that are close to Doncaster
- Present the median sold price in the suburbs and suggest alternatives

Results

• 54 suburbs found similar to Doncaster (using k = 20)

 Burwood East is the best option closet to Doncaster

	Neighborhood	Longtitude	Latitude	MedianSoldPrice	NumberSold	HighestSoldPrice	LowestSoldPrice
3	BURWOOD EAST	145.151119	-37.855230	992000	55	1801000	791000
